+13106418798

- 1. A system for processing markup data for a map on a personal digital assistant comprising:
  - (a) a personal digital assistant;
  - (b) an application on the personal digital assistant, the application configured to:
    - (i) obtain a map as an encoded and spatially indexed vector representation of geographic data from a server;
    - (ii) display the map on a screen of the personal digital assistant;
    - (iii) obtain markup data comprised of pixel data from a user that utilizes a stylus to markup the map displayed on the personal digital assistant;
    - (iv) create a file comprised of the markup data;
    - (v) upload the file of markup data from the personal digital assistant to the server.
  - 2. A system for processing mark up data for a map comprising:
  - (a) a personal digital assistant; and
  - (b) an application on the personal digital assistant, the application configured to:
    - (i) obtain a file comprised of markup data for a map; and
    - (ii) upload the file to a server.
- 3. The system of claim 2 wherein the markup data comprises pixel data for a markup entity.

+13106418798

- The system of claim 2 wherein the personal digital assistant obtains the file by 4. obtaining markup data from a user.
  - The system of claim 4 wherein the markup data is a redline line. 5.
- The system of claim 5 wherein the application configured to obtain the markup data 6. from a user is further configured to:
  - determine when a new redline object has been selected; and (a)
  - obtain a redline object while a stylus remains in contact with a screen of the personal (p) digital assistant.
  - The system of claim 6, the application configured to obtain further configured to: 7.
  - display a text edit dialog box on the screen of the personal digital assistant; and (a)
  - accept text user input in the text edit dialog box. (b)
  - 8. The system of claim 4 wherein the matkup data is a note.
- The system of claim 8 wherein the application configured to obtain the markup data 9. from a user is further configured to:
  - determine when a new note object has been selected; (a)
- accept a user selection of an anchor point in a display of a map on the personal **(b)** digital assistant;

- (c) display a text entry screen on the personal digital assistant;
- (d) accept text user input in the text entry screen; and
- (e) display an icon representative of a note at the anchor point
- 10. The system of claim 2 wherein the application uploads the data to a server by:
- (a) obtaining a socket connection;
- (b) obtaining an inventory of resident mapsets;
- (c) searching for markup data associated with the resident mapsets; and
- (d) uploading all resident markup data to the server.
- 11. The system of claim 10 wherein the markup data is uploaded to a server directory on the server using a hypertext transfer protocol PUT request.
- 12. The system of claim 10, the application on the personal digital assistant further configured to:
  - (a) download any new mapsets;
  - (b) delete unreferenced mapsets; and
  - (c) delete any markup data associated with the deleted mapsets.
  - 13. A system for processing mark up data for a map comprising a server configured to:
  - (a) obtain a file comprised of markup data for a map;
  - (b) convert the markup data to coordinate data; and

- use the coordinate data to obtain a standard data format (SDF) file that can be used (c) to superimpose the markup data on the map.
- The system of claim 13 wherein the coordinate data comprises mapping coordinate 14. system (MCS) coordinates and the server is further configured to convert the MCS coordinates to latitude/longitude coordinates.
- A graphical user interface for obtaining redline markup data for a map on a personal 15. digital assistant, the graphical user interface comprising:
  - determining when a new redline object has been selected; and (a)
- obtaining a redline object while a stylus remains in contact with a screen of the **(b)** personal digital assistant.
  - The graphical user interface of claim 15 further comprising: 16.
  - displaying a text edit dialog box on the screen of the personal digital assistant; and (a)
  - accepting text user input in the text edit dialog box. **(b)**
- The graphical user interface of claim 16 further comprising synchronizing the redline 17. markup data with a server.
- A graphical user interface for obtaining note markup data for a map on a personal 18. digital assistant, the graphical user interface comprising:

- (a) determining when a new note object has been selected;
- (b) accepting a user selection of an anchor point in a display of a map on a personal digital assistant;
  - (c) displaying a text entry screen on the personal digital assistant;
  - (d) accepting text user input in the text entry screen; and
  - (c) displaying an icon representative of a note at the anchor point.
- 19. The graphical user interface of claim 18 further comprising synchronizing the redline markup data with a server.
  - 20. A method for processing mark up data for a map comprising:
    obtaining a file comprised of markup data for a map on a personal digital assistant; and
    uploading the file from the personal digital assistant to a server.
- 21. The method of claim 20 wherein the markup data comprises pixel data for a markup entity.
- 22. The method of claim 20 wherein the obtaining comprises obtaining markup data from a user.
  - 23. The method of claim 22 wherein the markup data is a redline line.

- 24. The method of claim 23 wherein the obtaining the markup data from a user comprises:
  - (2) determining when a new redline object has been selected; and
- (b) obtaining a redline object while a stylus remains in contact with a screen of the personal digital assistant.
  - 25. The method of claim 24, the obtaining further comprising:
  - (a) displaying a text edit dialog box on the screen of the personal digital assistant; and
  - (b) accepting text user input in the text edit dialog box.
  - 26. The method of claim 22 wherein the markup data is a note.
- 27. The method of claim 26 wherein the obtaining the markup data from a user comprises:
  - (a) determining when a new note object has been selected;
- (b) accepting a user selection of an anchor point in a display of a map on the personal digital assistant;
  - (c) displaying a text entry screen on the personal digital assistant;
  - (d) accepting text user input in the text entry screen; and
  - (c) displaying an icon representative of a note at the anchor point.
  - 28. The method of claim 20 wherein the uploading the data to a server comprises:

- (a) obtaining a socket connection;
- (b) obmining an inventory of resident mapsets;
- (c) searching for markup data associated with the resident mapsets; and
- (d) uploading all resident markup data to the server.
- 29. The method of claim 28 wherein the markup data is uploaded to a server directory on the server using a hypertext transfer protocol PUT request.
  - 30. The method of claim 28 further comprising:
  - (a) downloading any new mapsets;
  - (b) deleting unreferenced mapsets; and
  - (c) deleting any markup data associated with the deleted mapsets.
  - 31. A method processing mark up data for a map comprising:
  - (a) obtaining a file comprised of markup data for a map;
  - (b) converting the markup data to coordinate data; and
- (c) using the coordinate data to obtain a standard data format (SDF) file that can be used to superimpose the markup data on the map.
- 32. The method of claim 31 wherein the coordinate data comprises mapping coordinate system (MCS) coordinates and the method further comprises converting the MCS coordinates to latitude/longitude coordinates.

- 33. A method for obtaining redline markup data for a map on a personal digital assistant, the method comprising:
  - (a) determining when a new redline object has been selected; and
- (b) obtaining a redline object while a stylus remains in contact with a screen of the personal digital assistant.
  - 34. The method of claim 33 further comprising:
  - (a) displaying a text edit dialog box on the screen of the personal digital assistant; and
  - (b) accepting text user input in the text edit dialog box.
- 35. The graphical user interface of claim 34 further comprising synchronizing the redline markup data with a server.
- 36. A method for obtaining note markup data for a map on a personal digital assistant, the method comprising:
  - (a) determining when a new note object has been selected;
- (b) accepting a user selection of an anchor point in a display of a map on a personal digital assistant;
  - (c) displaying a text entry screen on the personal digital assistant;
  - (d) accepting text user input in the text entry screen; and
  - (e) displaying an icon representative of a note at the anchor point.

- The graphical user interface of claim 36 further comprising synchronizing the redline 37. markup data with a server.
- An article of manufacture comprising a program storage medium readable by a 38. computer hardware device and embodying one or more instructions executable by the computer hardware device to perform a method for processing markup data for a map, the method comprising:

obtaining a file comprised of markup data for a map on a personal digital assistant; and uploading the file from the personal digital assistant to a server.

- The article of manufacture of claim 38 wherein the markup data comprises pixel data 39. for a markup entity.
- The article of manufacture of claim 38 wherein the obtaining comprises obtaining 40. markup data from a user.
  - The article of manufacture of claim 40 wherein the markup data is a redline line. 41.
- The article of manufacture of claim 41 wherein the obtaining the markup data from a 42. user comprises:
  - determining when a new redline object has been selected; and (a)

- obtaining a redline object while a stylus remains in contact with a screen of the (p) personal digital assistant.
  - The article of manufacture of claim 42, the obtaining further comprising: 43.
  - displaying a text edit dialog box on the screen of the personal digital assistant; and (a)
  - accepting text user input in the text edit dialog box. (b)
  - The article of manufacture of claim 40 wherein the markup data is a note. 44.
- The article of manufacture of claim 44 wherein the obtaining the markup data from a 45. user comprises:
  - determining when a new note object has been selected; (a)
- accepting a user selection of an anchor point in a display of a map on the personal **(b)** digital assistant;
  - displaying a text entry screen on the personal digital assistant; (c)
  - accepting text user input in the text entry screen; and (d)
  - displaying an icon representative of a note at the anchor point. (e)
- The article of manufacture of claim 38 wherein the uploading the data to a server 46. comprises:
  - obtaining a socket connection; (a)
  - obtaining an inventory of resident mapsets; (b)

- searching for markup data associated with the resident mapsers; and (c)
- uploading all resident markup data to the server. (d)
- The article of manufacture of claim 46 wherein the markup data is uploaded to a 47. server directory on the server using a hypertext transfer protocol PUT request.
  - The article of manufacture of claim 46, the method further comprising: 48.
  - downloading any new mapsets; (a)
  - deleting unreferenced mapsets; and (b)
  - deleting any markup data associated with the deleted mapsets. (c)
- An article of manufacture comprising a program storage medium readable by a 49. computer hardware device and embodying one or more instructions executable by the computer hardware device to perform a method for processing markup data for a map, the method comprising:
  - obtaining a file comprised of markup data for a map; (a)
  - converting the markup data to coordinate data; and (b)
- using the coordinate data to obtain a standard data format (SDF) file that can be (c) used to superimpose the markup data on the map.

- 50. The article of manufacture of claim 49 wherein the coordinate data comprises mapping coordinate system (MCS) coordinates and the method further comprises converting the MCS coordinates to latitude/longitude coordinates.
- 51. An article of manufacture comprising a program storage medium readable by a computer hardware device and embodying one or more instructions executable by the computer hardware device to perform a method for obtaining redline markup data for a map on a personal digital assistant, the method comprising:
  - (a) determining when a new redline object has been selected; and
- (b) obtaining a redline object while a stylus remains in contact with a screen of the personal digital assistant.
  - 52. The article of manufacture of claim 51, the method further comprising:
  - (a) displaying a text edit dialog box on the screen of the personal digital assistant; and
  - (b) accepting text user input in the text edit dialog box.
- 53. The article of manufacture of claim 52, the method further comprising synchronizing the redline markup data with a server.
- 54. An article of manufacture comprising a program storage medium readable by a computer hardware device and embodying one or more instructions executable by the computer

02:19PM

- (a) determining when a new note object has been selected;
- (b) accepting a user selection of an anchor point in a display of a map on a personal digital assistant;
  - (c) displaying a text entry screen on the personal digital assistant;
  - (d) accepting text user input in the text entry screen; and
  - (e) displaying an icon representative of a note at the anchor point.
- 55. The article of manufacture of claim 54, the method further comprising synchronizing the redline markup data with a server.
- 56. The system of claim 1 wherein the file comprised of markup data is separate from a file of the geographic data.
- 57. The system of claim 2 wherein the file comprised of markup data is separate from a file comprised of the map.
- 58. The system of claim 13, wherein the file comprised of markup data is separate from a file comprised of the map.

- 59. The method of claim 20, wherein the file comprised of markup data is separate from a file comprised of the map.
- 60. The method of claim 31, wherein the file comprised of markup data is separate from a file comprised of the map.
- 61. The article of manufacture of claim 38, wherein the file comprised of markup data is separate from a file comprised of the map.
- 62. The article of manufacture of claim 49, wherein the file comprised of markup data is separate from a file comprised of the map.
